

CHAMBER UNIT

STERILASER™

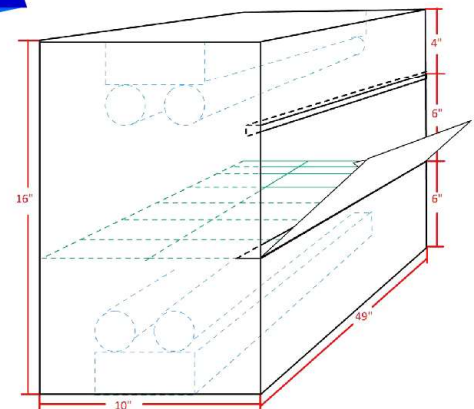

Killing Germs at the Speed of Light since 2008

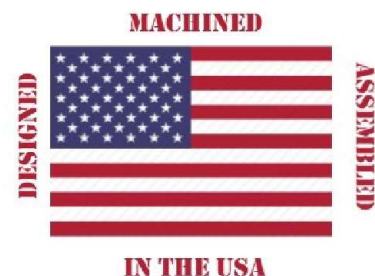

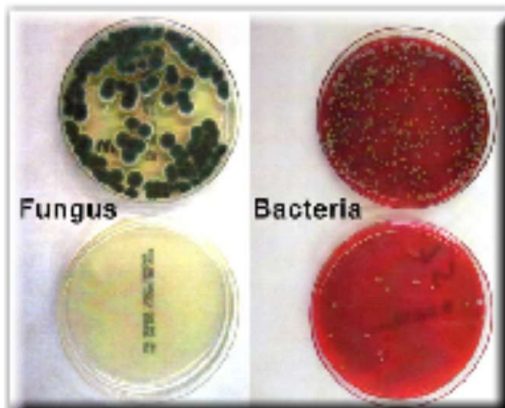

FASTEST/MOST EFFECTIVE WAY TO COMBAT PATHOGENS!

The STERILASER™ Chamber can be used for anything requiring quick reliable disaffection. With lights coming from both top and bottom, exposed surfaces will receive up to 2.7 mW/cm² of germicidal ultraviolet (UV-C) light, killing harmful BACTERIA, FUNGI and VIRUSE (including COVID-19) in as little as 20 seconds.

The door automatically turns the unit off to safe guard against unintentional opening, which would expose the user.

The 10"d x 16"h x 49"w unit fits easily on any stable shelf or counter.
