## ElectroClave UV-C Disinfection System

*ElectroClave™ UV-C Light Disinfection for Hospitals, Medical, or Any Environment*

*The ElectroClave achieves a 99.9% reduction of Staphylococcus, Escherichia coli, MRSA and CRE on hard, non-porous surfaces. ElectroClave addresses the cross-contamination hazard that mobile & high-touch devices pose in healthcare, and other environments.*

360-degree fail safe UV-C disinfection of all device surfaces

The ElectroClave has been tested, with data submitted to the EPA. The EPA's review confirmed that the ElectroClave is 99.9% effective against: Staphylococcus, E. coli, MRSA and CRE on non-porous hard surfaces.

Over-the-wire Device Syncing Through MDM

Cloud-Based UHF RFID tracking, Disinfection Reminders & Compliance Monitoring (via push notifications through the accompanying app)

Non-Touch Access with NFC Employee Badges

Device Auditing & Automated Scheduling of Services

Live ElectroClave operation status & disinfection status throughout the organization

User Awareness of Disinfection Status

HIPPA Compliant

10 USB Smart Charging Ports. Wall & Desktop Mounts with Locking Feature

SSECLAVE2R3 - 2 Bay  
SSECLAVE3R3 - 3 Bay  
SSECLAVE4R3 - 4 Bay

### UV-C Smart Sanitization

- 360 Degree Exposure
- Rapid Sanitization
- AOAC Efficacy Testing
- Zero Material Degradation

### MDM PORTAL ADMINISTRATIVE/USER FUNCTIONS

- Web-based access via any device
- Location Assignment & Descriptions i.e. OR Floor 2, ICU Floor 3
- User Tracking & Device Tracking for Accountability
- Active Inventory including Mobile Device Management by User
- Device Tracking Log & Storage Log per Device by User
- Device Disinfection Logs - all time or specific period
- User Disinfection Logs - all time or specific period
- Security Policy Audits by Device

## Medical Grade, Multilayer Screen Protectors

Seal Shield medical multi-layer screen protectors are waterproof, UV resistant, and compatible with hospital cleaners & disinfectants. Seal Shield patented, proprietary screen protector design is perfect for any healthcare organization – enabling the ability to thoroughly disinfect all high-touch screens, including patient monitors, display screens, shared tablets, and mobile phone screens.

### Seal Shield Infection Control Screen Protector Specialized Design

Typical screen protectors are often composed of PET, or standard glass, which is not compatible with harsh cleaners and can't stand up to regular & vigorous disinfection. The growing use of UV sanitation technology in medical & surgical environments can also lead to expensive equipment damage. What separates Seal Shield medical screen protectors from standard touch screen protector films, is a complex, 3-layer design for superior strength, functionality, and sanitization. Importantly, This screen protector contains an antimicrobial agent to prevent microorganisms from degrading the product.

### Seal Shield Customizable Touch Screen Protectors

Seal Shield specialized touch screen protectors are purposefully designed using patented, multi-layer technology composed of unique silver zeolite particles for added tensile strength to protect against dings & scratches while preventing device degradation. With infection-control as the primary goal, Seal Screen Protectors are compatible with medical-grade disinfectants & cleaners for the convenient sanitation of high-touch surfaces in all medical settings or any environment. This includes bleach, & Lysol Disinfectant Sprays, which were recently approved by the EPA to effectively kill SARS-CoV-2 (the virus that causes COVID-19) in just two minutes. Screen protectors are available in customizable sizes for any flat screen monitor, surgical monitor, patient monitor, display screen, tablet, or mobile device.

### Customizable Screen Protector Sizes

Seal Shield medical screen protectors act as a touch screen protector film that can be custom cut for any device surface. Sizes include industrial, desktop & computer monitor, hospital tv, touch screen monitor, cell phone screen, and tablet screen protector applications.
