

### Scalable & Secure

Offering a secure and scalable system built from the ground up to provide caregivers with access to vital information and knowledge, while delivering enhanced healthcare data security.

### Clinical Optimization

Providing best practices as well as tracking real-time trends that can be immediately reviewed. With the ability to view historical data and compare performance it can be determined how changes in procedures can affect patient satisfaction scores.

### Patient Safety

Using communication to support the ongoing efforts to ensure patient safety while helping to prevent falls and other dangers to the patient's well-being.

**Infant and Child Security**  
**Wander Management**

**Reporting and Analytics**  
**Workflow Architecture**

**Staff-Patient Communications**  
**Mobility Solutions**

Prioritize patient safety while helping hospitals and clinics meet industry standards, comply with regulations, and improve patient and staff satisfaction.

- CEC can design and install staff-patient communications systems that integrate with wireless devices so caregivers are always reachable.
- Systems can be customized for the unique needs of any healthcare facility to support internal initiatives and capture data on important metrics for better decision-making.
- Medical decisions can be made before caregivers arrive at the patient's room, which can reduce readmission rates and hospital-acquired infections.
- Locate valuable medical equipment, staff members and patients. No more wasted time spent searching. Reduce delays when equipment is needed.
- Reduce costs by increasing utilization rates of mobile equipment such as IV pumps to optimize inventory levels.
- Improve care by using valuable data to improve processes and reduce bottlenecks to patient care.
- Improve staff safety by giving staff a way to call for help when faced with dangerous patients.
