

SYSTEMSCARE™

INVEST IN TECHNOLOGY PERFORMANCE

Emergency Response

Establish technical support on-site and off-site, 24/7

Repair Services

Full parts and labor support on systems repairs

Software Support

Stay current with latest upgrades and patches

Businesses have invested in technology that provides safety, security and systems continuity to protect their employees and customers. CEC provides a managed service solution, **SystemsCare**, to assure that technology is operating as designed. Our experienced team of service specialists, inspectors, and technologists provide on-site and remote support to keep people and systems operating at peak performance.

Network Security

Install the fastest firmware and security patches.

End-User Training

Staff training focused on system best practices

Systems Evaluations

Scheduled technical and preventative maintenance

SystemsCare **BENEFITS**

Staff Savings: It would be an expensive endeavor for customers to train their internal staff to support the ever-changing systems and software that CEC staff maintains every day. CEC staff are technology experts that carry industry licenses and certifications and are continually trained and certified by the manufacturer's on the latest systems.

System Effectiveness: A well maintained system means greater uptime. Support that includes Software Upgrades and Training assures that the current features are available and that your team has the knowledge to fully leverage the systems capability.

Predictable Expense: Unplanned repair expenses can cause havoc on organization cash flow. Support agreements remove the mystery and provide a fixed amount that is easy to budget for. MSP extends that concept to capital purchases and conserves capital.
